

POMOCA

SWISS  MADE

W19/20 - EN

FORMULA POMOCA SWISS MADE

For over 85 years, the best athletes in the world, top guides and mountain rescuers have trusted POMOCA skins.

POMOCA skins have gained global recognition over the past decade, thanks to innovations such as Safer Skin (100% waterproof), GLIDE (anti glopping and gliding treatment) and Race (the fastest skins ever made). POMOCA textile engineers continue to apply and advance this knowledge, resulting in further technological advances and an ever better product.

In the following pages, you will discover the technological secrets that allow for faster gliding and better grip.

Formula POMOCA

On a ski tour, climbing on skins takes up to 80% of the time. The skins are the skier's "tires", a safety and performance feature. The wrong choice of skins can ruin your day.

The largest ski touring manufacturers understand this, and they have confidence in POMOCA. They are reassured by the excellent, consistent quality of POMOCA climbing skins, the continued development of new technologies such as TIPON, SAFER SKIN LIGHT, EVER DRY 3.0, GLIDE PRO and impeccable service.

POMOCA Formula represents the continual quest for excellence, POMOCA's main goal. POMOCA's hallmark is a well structured collection, continual innovation, and flexible, professional service.

Our OEM partners:

Saimaa Seals

POMOCA, in coordination with EOCA and the Finnish Association of Nature Conservation is supporting the protection of the Saimaa Ringed Seal in Lake Saimaa, Finland. After being close to extinction in the 50's, the Saimaa seal is still in danger today. Their main threat comes from non-approved fishing nets and traps (killing 50% of the baby seals) in addition to the ever-increasing environmental toxins. Today, the total population is estimated to be only 300 seals.

Protect Our Winters!

POMOCA is proud of its partnership with Protect Our Winters (POW) Switzerland, a non-profit organization founded in 2007. POW has done much to demonstrate the commitment of the outdoor sports' community to fighting climate change. Its main objective is to « raise awareness amongst the Swiss population by committing to a sustainable lifestyle and adapting its principles to mountain sports and leisure activities ».

Skin Belts

At POMOCA we do everything possible to reduce waste through more optimized production technologies. Additionally, we like to give a 'second life' to our excess trimmed material. We have established a partnership with Skinalp of the Aosta Valley, Italy. Skinalp produces unique and functional apparel accessories from the excess plush material of our skins!

Do you want a Skinalp belt? Order it at www.skinalp.com. Proceeds go to support the Sanonani House in Nepal. (www.sanonani.house).

Handicapped Workshops

POMOCA cooperates with 3 handicapped workshops in Switzerland, France and Spain for assembling processes giving work to an equivalent of 3 full-time jobs.

Fluoro-free skins

EVER
DRY

100% Hydro-electric Energy

Beginning January 1, 2017, the entire POMOCA factory will be running with 100% Swiss Hydroelectric Energy. All the energy consumed at POMOCA (heating, production, offices, etc.) will be ecological.

Pomocup

The skimo device

Pomocup is the first device conceived by and for ski tourers. Easy and practical, the device is placed with a secure magnet on the ski and measures data specific to ski touring! The data is then transmitted in real-time to the phone. Once you're done, you can analyze your performances in greater detail with the web interface.

Pomocup was born from a partnership between **POMOCA** and **GaitUp**, a spin-off of the EPFL (Technical University of Lausanne, Switzerland) a leading university with 15 years' experience in motion analysis for medical and sports industries. What better partnership than two industry leaders!

Pomocup contains several sensors: a 3D accelerometer, a 3D gyroscope, a thermometer and a barometer which collect 1200 data per second. With this data, and thanks to the advanced algorithms of **GaitUp**, **Pomocup** calculates multiple features simultaneously such as the slope angle, the number of kick turns, the gliding performance or even power.

Pomocup also uses the GPS data from your phone to map and save your route.

Pomocup
68x33x17mm
24g

Pomocup
Art.-Nr. 10-0007190000
(Sold only by pack of 4)

Gait Up is providing innovative products for objective evaluation of health and performance, based on wearable inertial sensor technology. Their mission is to improve human performance and prevent disability through high quality motion sensing and analytics.

Functionality

Transitions (quantity and time):

-  · Kick turns
-  · Skins off
-  · Skins on
-  · Skis to back pack
-  · Take out skins from back pack
-  · Pause

Technique Review:

- Cadence
- Number of steps
- Stride length
- % Glide/Grip
- Power

General Measures:

- Time
- Distance
- Temperature
- Altitude
- Slope angle
- Total ascent/descent
- Ascent/descent vertical speed

Technical data

Mobile app:

Skilog App for Android & iOS.

Web interface:

www.skilog.ski

Data transfer:

Bluetooth low energy (BLE).

High speed micro-usb.

Certifications:

CE, FCC, IC.

Battery:

30h life, Rechargeable Lithium Ion Polymer,
Mini-usb cable to charge.

Dimensions:

68.1 x 33.6 x 17.7 mm.

Weight:

24 grams (including ski fixation system).

Internal memory:

microSD Card, 8GB (>500h).

Operating temperature:

-20°C to 45°C

Attachment system:

2 magnets (Neodymium, N45, ~3kg force).

Usage

1. With smartphone:

Install the Skilog app on your Android/iOS phone and pair your Pomocup with it. Then start the tour in the phone interface. The Pomocup will start and will be transmitting data to your phone in real-time via BLE protocol. Your tours will be automatically synchronized with the Skilog Web interface when your phone is connected to the Internet.

2. Without smartphone:

If you don't have a smartphone, you can start a tour by switching on the Pomocup. After the tour you can connect your Pomocup to the computer via usb cable and upload your tour files to the Skilog Web interface.

POMOCUP
SWISS MADE

What is a skin?

1. A PLUSH WITH ANGELED FIBERS...

The plush offers GRIP and GLIDE to the skin. These characteristics vary depending on the material used (nylon, mixed or mohair) and the way the fibers are woven (thicker or thinner; longer or shorter; more or less angled). Normally, a skin that GLIDES more, GRIPS less.

3. ...WITH A LINING...

The lining prevents water transfer from the plush to the adhesive. A lining that is not waterproof causes dampness on the adhesive and reduces its tack (stickiness). The adhesive could come away from the skin and stick to the ski. A quality lining guarantees the correct functioning of the adhesive and also increases resistance to the skin tearing.

2. ...SUBJECT TO VARIOUS TECHNICAL TREATMENTS...

These treatments provide waterproofing for fibers, which is key to preventing snow clumps from forming. Wet fibers can freeze with a change in temperature. When the fibers freeze they attract snow which sticks to the skin, forming clumps. They also give the color to the skins and help with fixing the fibers to the angle/backing, which is why it is important for durability and GLIDE/GRIP.

4. ...AND AN ADHESIVE

The adhesive attaches the skin to the ski. In cold and wet conditions, adhesion may be difficult: in general, the adhesives do not perform well in water or cold, as it is harder for them to stick in a wet environment (mist or heat in spring/damp snow) or in the cold.

Technologies

The technologies of POMOCA are based on a deep understanding of snow, enhanced by research and development. Textile engineers and chemists work hand-in-hand with mountain guides and athletes. Together they modify the materials' contact surfaces and thus push the effectiveness of climbing skins to unimaginable heights.

HYDROPHOBIC TREATMENT

EVER DRY

EVER DRY 3.0 represents our largest step forward with respect to the environment: this is the first skin treatment on the market which does not contain any perfluorocarbon, a chemical found to be harmful to the environment. In 2017, **EVER DRY 3.0** will be used to treat all Climb Pro Mohair skins, making this the first PFC-Free skin!

EVER DRY

In the interest of continual improvement, POMOCA's chemists have developed a new generation of EVER DRY that is gentler on the environment. The **EVER DRY 2.0** treatment contains no PFOA, a chemical component that is harmful to the environment. Since April 2015, EVER DRY 2.0 technology has replaced the old EVER DRY in the entire collection of skins from POMOCA and its OEM clients.

GRIP

GRIP

Good climbing grip is very important. So POMOCA has developed a combination of materials and weaving techniques to combine glide and durability with gripping power. Proper alignment and the fiber attachment systems make POMOCA skins very stable under all conditions and for the entire life of the skin.

MEMBRANE

SSV

Thanks to the thinner layers, POMOCA has succeeded in making its classical SAFER SKIN membrane lighter. SAFER SKIN LIGHT (SSL) is 12% lighter which means 150g/m² less. SSL makes the pair of skins about 60-75g lighter while remaining 100% waterproof.

SSUL

Safer Skin Ultra Light (SSUL) is a membrane combining optimal lightness with the durability of the Safer Skin Light. With the SSUL, POMOCA not only reduces the weight but also the size of the skin while maintaining the same level of performance.

SSL

POMOCA has succeeded in making its classical SAFER SKIN membrane lighter. Thanks to finer layers in the membrane, **SAFER SKIN LIGHT** is 12% lighter (150g/m² less). While remaining 100% waterproof, and with slightly less wear resistance, SAFER SKIN LIGHT makes the pair of skins about 60-75g lighter.

SAFER SKIN

Exclusive to POMOCA, **SAFER SKIN** is a 100% waterproof membrane that completely blocks the absorption of moisture and guarantees good glue performance on a dry base. What's more, SAFER SKIN offers excellent tear resistance and ease of handling. It is very easy to trim the skin, and it remains 100% waterproof after cutting.

MEMBRANE

TIPON

The new **TIPON** membrane technology takes advantage of the most recent generation of polysiloxanes. The juxtaposition of two types of induction (a membrane and an adhesive) directly into the fabric guarantees better performance. Skins with TIPON are more compact (40% less volume), light (15% less weight) and easy to use thanks to the new characteristics that surpass existing technologies. Completely waterproof, washable, UV-resistant, and effective even in extreme temperatures, TIPON represents an advance in terms of both safety and comfort.

GLIDE

GLIDE

Thanks to the exclusive **GLIDE** process, ski tourers get extra glide with less effort. This treatment, which is applied at the end of the production process and to the entire length of the fiber, makes the skin glide and resist moisture more effectively. Skins with GLIDE offer an effective process for the entire life of the skin, and unique anti-glopping performance.

GLIDE PRO

POMOCA has developed a new GLIDE process. With the same application technology, but a new, very high-quality **GLIDE PRO** product, skins with GLIDE PRO offer exceptional extra glide, which is essential for high-level competitors.

POMOCA
SWISS MADE

RACE PRO 2.0

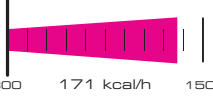

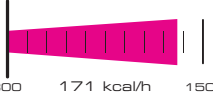

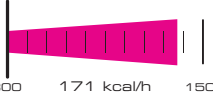

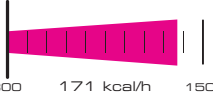

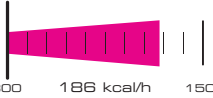

Ready to race

One of POMOCA's priorities is to always offer the fastest skin on the market. After the success of the RACE, launched in 2007, and the RACE PRO, launched in 2012, the POMOCA R&D team have succeeded in developing an extraordinary skin: The RACE PRO 2.0 generation. Competition-tested since early 2014, POMOCA has invested two years in optimizing its performance, achieving a skin with an unimaginable glide. Thanks to the combination of a weaving system, fibers and a glide treatment, GLIDE PRO, the RACE PRO 2.0 is a must-have for monopolizing the podiums of the world's most prestigious races.

Making the most of all this development, POMOCA also launches a skin concept: The RACE PRO GRIP. Without renouncing excellent glide, the POMOCA RACE PRO GRIP provides excellent grip and increased durability; ideal for steep climbs, icy snow or as training skins.

CLIMB

Climb and Glide

Improvement of the glide factor is paramount to all high quality skins. Recent studies by the TSA in Innsbruck have demonstrated that between a poor gliding and well-gliding skin, an energy saving of up to 150kcal/hr is possible, which is 50% of the gliding energy. Considering that standard energy consumption during physical exercise is 700kcal/hr, using a well-gliding skin can thus enable energy savings of 20%! In other words, after four hours of physical effort with a well-gliding skin, you will have saved the equivalent of 100g of chocolate cream!

POMOCA has applied the RACE PRO 2.0's developments in the CLIMB range, which has enabled achievement of mixed skins with a glide that is reminiscent of old RACE skins. The CLIMB PRO S-GLIDE is a logical evolution from the CLIMB PRO GLIDE: a high performance, very resistant skin for the more demanding skier, featuring an even higher-performing glide.

The CLIMB 2.0, with its new 100% yellow look, is an ideal skin for all alpine skiing enthusiasts. With its performance, Safer Skin Light and Ever Dry 2.0 technologies, which guarantee the skin's quality, it is now even lighter, and even better value for money.

Click Lock

The Click Lock is the safe way to attach the skin to the ski tip. With only 2 "clicks" you can change your buckle and choose amongst 5 different sizes. No tools are needed, you can even do it with gloves.

The Click Lock is also compatible with the Z-hook, for all skins with a hole on

the tip, and the stretcher, for all skins with a nick on the tip.

The Click Lock is also available as spare part. To install the Click Lock, you only need a screwdriver. (3 screws)

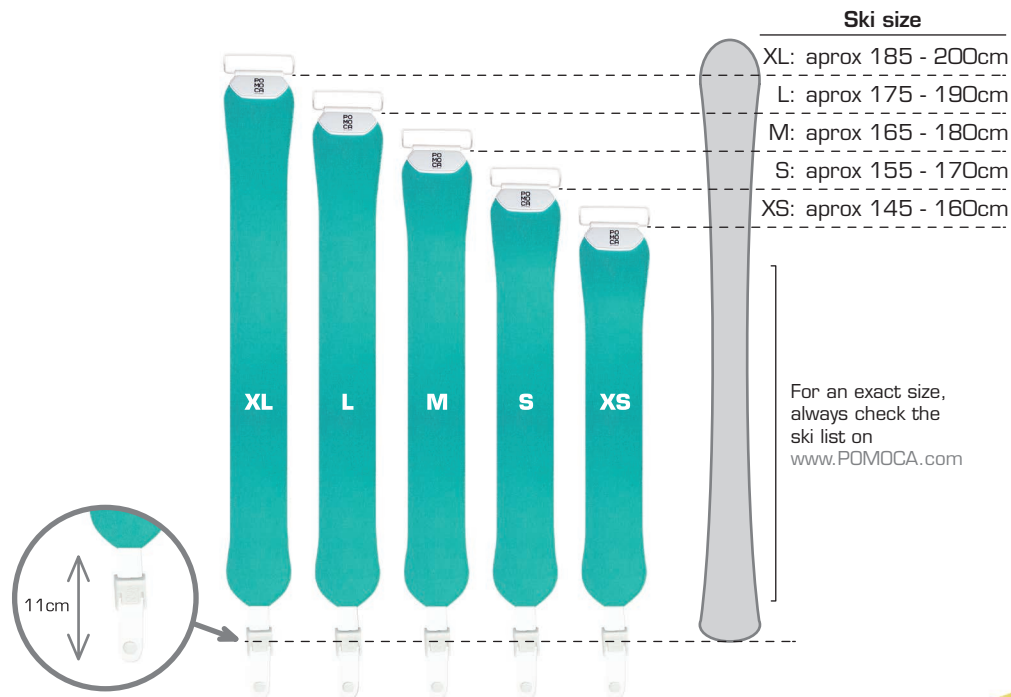

ready2climb

Your skins ready in 2 minutes

The POMOCA R&D department works hard to make your life easier. Preparing a self-adhesive skin for skis can take a long time and requires specific knowledge. POMOCA has developed the new universal, light, and easy-to-apply **ready2climb** set. The **ready2climb** skin can be cut to a specific ski in just two minutes without any special tools.

The adjustable loop can be fixed to any type of ski. For this system, POMOCA offers a complete list of skins on the market, so you can find the self-adhesive skin best suited to your needs.

Choosing the correct skin has never been so simple:

- On the web site www.POMOCA.com, enter the name of your ski brand and model to find the correct skin size.
- Select your preferred skin quality.
- Take the selected skin, adjust the tip attachment to your ski, remove the protective sheet and stick the skin to the base of the ski.
- Using the POMOCA cutter, cut both sides of the skin to an even length.
- You are now ready to start skinning!

Back Fix

A skin for all ski lengths

Back Fix is the evolution of a fixing system that has been tested and is easy to use. The skin has a strap already sewn to the back although the front can be cut to adjust to the ski length. Therefore the Back Fix skin adapts perfectly to all ski lengths.

The Click Lock is fitted on the front of the skin making this a universal system. With just 3 screws, you can precisely fit this bracket to all skis, no matter the spatula shape and length.

With the skin adjusted to the ski length, the POMOCA precision cutter supplied allows you to trim the sides of the skin by automatically releasing the ski edges.

Your pair of skins is ready in 10-15 minutes.

Do you want to carefully manage your stock (one skin size for all skis)? Do you want more precision for the size of your ski? Back Fix is made for you.

FREE

Feel free for your ride

Most freeriders make few exceptions on skis, bindings or boots, they are always searching for the maximum sensation during their descent. That is why the rest of their equipment must be advanced to ensure the best performance while keeping weight at a minimum.

With the new FREE PRO, POMOCA offers a product that allows freeriders to save energy during ascension and take better advantage of the descent. With its new ultrafine and light membrane, the skin can even be rolled up into your pocket.

Thanks to recent research undertaken by the Innsbruck TSA, the velvet also has an increased glide. To finalize this innovative skin, a new binding system has been developed, based on the system used by racers. From now on it is possible to remove skins from the front of the ski. You no longer need to remove your skis to take off your skins.

Pomoca sole

HOJI FREE

The POMOCA HOJI FREE sole is the new standard for Freeride activities. Its shape makes it perfect for the demands of the best Freeriders in the world, both in terms of ascent and descent. Its triangular studs ensure contact with the ground in all conditions, rocks, mud and snow. The surface in contact with the ground offers sealing even on the worst slippery surfaces. The two high wings contribute not only to the aesthetic effect but also to functionality, especially when walking with the central part of the foot.

In the rear area there is a greater volume „damping“ to provide comfort during the walking stages.

Fully compatible with ISO 9523 standards, the new sole guarantees interfacing with no-pin connections that meet the requirements specified in the regulations set by ISO standards. The compromise between wear resistance, adherence and strength puts this sole in the category of the best Freeride sole on the market.

HOJI

The Hoji sole design meet the needs of the ski Tourer.

Mud, snow, rock, the compound of the rubber ensure grip and traction even in the most critical situations. Stability in the heel area is offered by the large studs designed for the self-cleaning.

The aesthetic-functional features of this product represent the best compromise between reliability and performance.

BEAST

A performance sole for the Freerider. Its compound guarantees an exceptional seal for smooth and wet surfaces. Designed to provide ground contact at each step of the roll. The height of the dowels in the heel area contributes, together with the grip offered by the POMOCA compound, to downhill safety.

Stability and reliability the key concepts of this sole.

SPEEDFIT

Designed for athletes, the SPEEDFIT sole combines speed and lightness. Made to meet the needs of the athlete.

The regular distribution of the lugs favors the dynamicity during the fast walking progression, while their geometry offers stability on transverse movements.

Thanks to the compound the grip is guaranteed. Wear resistance lightness make this sole the perfect solution for mixed and uneven terrain.

TLT8/PDG2

This project represents the essence of the ski mountaineering sole. Durability and lightness.

The compound guarantees a high grip on snow, mud and rock. The defined number of lug ensures traction on every surface.

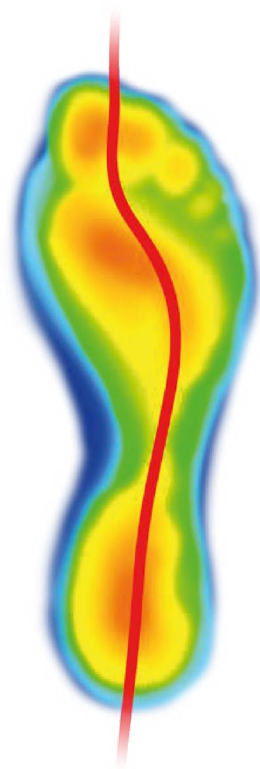

The product, meeting the regulations and the requirements of lightness, is the best solution for race activities, without neglecting durability.

POMOCA

SWISS MADE

COP - Center Of Pressure

BIOMECHANIC RESEARCH

Naturally, the foot draws an "S path" during the rolling, the COP - Center Of Pressure. The design of the sole supports the natural rolling of the foot.

GLIDING ZONE

Along the newly designed gliding path, the foot unreels smoothly. The structure reduces deformation energy and provides a continuous rolling ow and a truly owing experience.

TRACTION ZONE

Alongside the Gliding Path, there is a traction zone. Its lug structure adapts to soft or uneven terrain as well as varying surfaces, providing traction on a variety of surfaces.

TRAILBREAKER

Trailbreaker outsole is a revolutionized concept by POMOCA, designed for varied alpine terrains. The grip is given, but the focus is on traction and gliding, a smooth, dynamic running is in the foreground. Thus the sole consist of a gliding path as well as traction zone. The gliding path gives stability and friction on hard grounds, the traction zone provides performance on soft grounds.

SPEED MTN

Thanks to the geometric subdivision of the studs, the SPEED MTN sole is the project that meets the traction requirements typical of the mountain approach. The auto-composed pattern, thanks to an algorithm generated by the analysis of mountain walking, divides the sole into different zones. In the central surface the density of the cleats draws an „S“ that reflects the characteristics of the biomechanical analysis of the movement of the foot. In the perimeter area the cleats favor the self-cleaning of the sole offering traction even in muddy conditions. The climbing-zone in the front area, together with the butylic compound permits safety conditions on dry and wet rocks.

SPEED HIKE

Designed for the natural foot rolling. Guarantees the best traction on all types of terrain. The S-Path offers smoothness during rolling without compromising its grip. The large studs in the forefoot area stabilize the shoe during lateral movements. The layout of the perimeter lugs ensures stability over the entire shoe in every step of the walk. The combination of compound and the aggressive look of the sole classify this product as the best solution for the typical "speed hiking" approach terrain, even in the hardness climatic conditions.

ALPEN

The ALPEN project combine the organic style of the tread pattern, with the best comfort and wear resistance. The sole has been designed with an irregular pattern which interfaces perfectly with the various terrains thanks to the studs profile. The S-Path of this model, divides the tread into two independent portions. The separation in two parts together with the compound guarantees a unique adaptable effect on the ground in all the roll phases from heel to the toes. The excellent rubber provided by POMOCA ensure performance both on dry and wet surfaces.

SPEED MTN PRO

Developed for the most challenging approaches, with a mix of rocky and soft ground, such as mud and grass. Thanks to the lugs, deep and spaced apart, the traction and self-cleaning are guaranteed, as well as the grip on dry and wet surfaces, due to butyl compound by POMOCA®.

Portrait of Louis & Olga Dufour

Louis & Olga Dufour

Advertising published in 1946

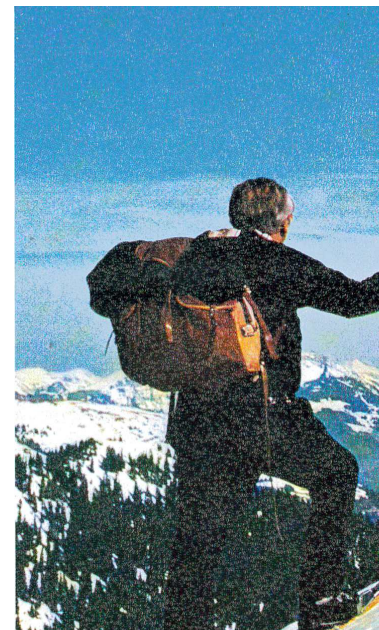

Ski competition in Les Avants. Photo: Louis Dufour

The Dufour family's history has been linked to tourism and winter sports since as early as 1870. Louis Dufour, a hotelier in Avants, Switzerland, was the first to use skis in the French-speaking part of Switzerland. The family also organized skiing and bobsledding competitions for the prestigious hosts of Montreux, Switzerland.

In the 1930s Louis' son, Éric, an engineer and avid ski touring fan, developed and marketed a canvas rescue sled. Thanks to its skis and poles, the "Gaillard-Dufour" sled was able to transport injured people. Alongside his father, Éric developed the production of non-slip skins, and later adhesive skins, as well as many other mountain accessories. Around 1941, the Dufour company successfully launched rubber sole production for city and mountain shoes. Assisted by his wife, Antoinette, Éric managed the company until 1988.

In 1996 their son, Guy, took up the torch. His expert knowledge of rubber gives POMOCA skins their unparalleled waterproofing. In 2011, POMOCA joined the SALEWA group, turning a new page in its history and facing new challenges.

For more than 80 years, thanks to the quality of its products and technological innovations, Swiss label POMOCA has established itself as the undisputed worldwide specialist in climbing skins. Resolutely focused on progress, POMOCA constantly develops new products—something that goes hand in hand with its ambitious and innovative concept—in order to satisfy and delight ski mountaineering enthusiasts.
